QUESTIONS

Q1
Handling ArithmeticException
10 marks

Q2
Handling
ArrayIndexOutOfBoundsException
10 marks

Q3
Handling
NumberFormatException
10 marks

Q4
Handling Multiple Exceptions
10 marks

1/4 answered

Q1 Handling ArithmeticException10 marks

Write a Java program to divide two integers entered by the user. If the denominator is zero, handle the exception using a try-catch block and display an appropriate error message.

Your Code

```
1 import java.util.*;
2 class Main {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         int a = sc.nextInt();
6         int b = sc.nextInt();
7         try {
8             System.out.println(a / b);
9         } catch (ArithmeticException e) {
10             System.out.println("Cannot divide by zero");
11         }
12     }
13 }
```

Input
20 5

Output
4

Run

Q2 Handling ArrayIndexOutOfBoundsException10 marks

Write a Java program to create an integer array of five elements. Ask the user to enter an index and display the corresponding element. If the index is outside the valid range, handle the exception and display an error message.

Your Code

```
1 import java.util.*;
2 class Main {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         int[] arr = {10, 20, 30, 40, 50};
6         int index = sc.nextInt();
7         try {
8             System.out.println(arr[index]);
9         } catch (ArrayIndexOutOfBoundsException e) {
10             System.out.println("Invalid Array Index");
11         }
12     }
13 }
```
